

Strategies 1-3: Timing & Interventions

- Need operational definitions: essential care, basic care, “childbirth care”
- Simplify visuals: Organize interventions by continuum of care: before labor, labor, delivery/childbirth, postnatal
- Distinction between actions and outcomes
- Organize interventions – some are duplicative, overlap, or components of care packages
- Move postnatal care to separate activity
- Include community activities in addition to facility

Quality of Care

- Important area of emphasis
- Focus on midwives should be expanded to skilled attendants, nursing, CHWs
- Should access to care be included, in addition to delivery of care?
