Newborns are perhaps the most vulnerable population the world over. Preterm or babies born too early, less than 37 weeks gestation, are particularly at risk. Currently, prematurity is the leading cause of death among children under five around the world, and a leading cause of disability and ill health later in life. Sub-Saharan Africa and south Asia account for over 60 percent of preterm births worldwide. Of the fifteen million babies born too early each year, more than one million die due to complications related to preterm birth. Low birth weight (newborns weighing less than 2,500 grams at birth), due to prematurity and/or restricted growth in utero, is also a major contributor of newborn and child deaths, as well as disability and non-communicable diseases globally.

Nearly 85 percent of preterm babies are born between 32 and 37 weeks gestation and most of these babies do not need intensive care to survive. Solutions to improve the survival and health of vulnerable preterm and low birth weight babies exist. Essential newborn care (drying, warming, immediate and exclusive breastfeeding, hygiene and cord care) as well as basic care for feeding support, infections and breathing difficulties can mean the difference between life and death for small babies. More effort is needed to identify women at risk of preterm labor and support them to give birth in a health facility that can offer extra care when needed, such as support for adequate feeding with breast milk, continuous skin to skin contact, antibiotics, and antenatal corticosteroids. To do this, it is critical that families, communities and health care workers value small babies so that they receive the life-saving care they need. To turn the tide on these preventable deaths, we need action across the spectrum of care from adolescence and preconception, pregnancy, the safe management of labor and delivery, and effective immediate and later postnatal care.

Current, local data are crucial to inform priorities and drive scale-up. This national level profile provides the most current national-level information on the status of prevention and care for preterm birth and low birth weight in Sierra Leone. Data presented highlight a number of risk factors relevant to preterm and low birth weight in Sierra Leone as well as the coverage of important care for women and newborns from pregnancy, labor and delivery and the postnatal period. There is also information that provides insights into the health workforce, health policies, health information and community mobilization relevant to preterm birth and low birth weight.

The information provided here can be used to understand the current situation, increase attention to preterm births in Sierra Leone and to inform dialogue and action among stakeholders. Data can be used to identify the most important risk factors to target and gaps in care in order to identify and implement solutions for improved outcomes.

Much is already being done to prevent preterm birth and low birth weight and to improve outcomes for small babies. A safe and healthy start to life is at the heart of human capital and economic progress in every country, making care for small babies an essential investment in both the short- and long-term. As government leaders, civil society organizations, health workers, families, communities and other partners come together to enact change, we can prevent babies from being born too early and too small, and ensure that small babies get the critical life-saving care and nurturing they need.

PRETERM BIRTHS AND DEATHS

Preterm birth rate (babies born <37 weeks): 10%
Low birth weight rate (babies born <2,500g): 11%
Babies born preterm per year: 23,000
Ratio of boys to girls born preterm: 1.12
Babies born per year <28 weeks: 1,100
Impaired preterm survivors per year: 500
Direct preterm child deaths per year: 2,840

HEALTH FACILITY READINESS

Deliveries with ACS in stock: 58%
Deliveries with space designated for KMC: 60%

HEALTH WORKFORCE

Number of physicians, nurses and midwives per 10,000 population: 1.9
Clinical standards for preterm care at hospital level: 3/10
Nursing students receive formal education in neonatal care: NO DATA

HEALTH POLICY

National plan for RMNCAH: 3/10
RMNCAH plans include preterm component: NO DATA
Policy for kangaroo care: NO DATA
Policy for antenatal corticosteroids use: NO DATA
Policy for safe oxygen use and CPAP: NO DATA

HEALTH INFORMATION

Perinatal mortality audit in policy: NO DATA
Birthweight captured in health management information system: NO DATA
Gestational age captured in health management information system: NO DATA

COMMUNITY ENGAGEMENT

National advocacy group for parents of preterm babies: NO DATA
Preterm included in national RMNCAH behaviour change strategy: NO DATA

DEFINITIONS AND DATA SOURCES

PRETERM BIRTHS AND DEATHS

Preterm birth rate
Probability of baby being born alive before 37 completed weeks of pregnancy, expressed per 1,000 live births. (5)

Low birth weight rate
Percentage of infants weighing less than 2500g at birth. (1)

Number of preterm births
Number of babies born alive before 37 completed weeks of pregnancy. (5)

Ratio of boys to girls born preterm
Ratio of baby boys to baby girls born alive before 37 completed weeks of pregnancy. (5)

Extreme preterm babies (<28 weeks)
Number of babies born alive before 28 completed weeks of pregnancy. (5)

Impaired preterm survivors
Number of preterm babies who survive with moderate or severe neurodevelopmental impairment. (6)

Direct preterm child deaths per year
Number of deaths amongst children under 5 years of age directly due to preterm birth complications. (7)

HEALTH FACILITY READINESS

Delivery facilities with antenatal corticosteroids in stock
Percentage of facilities conducting deliveries with either dexamethasone or betamethasone in stock. (8)

Delivery facilities with neonatal bag and mask in stock
Percentage of facilities conducting deliveries with ambu bag and neonatal mask size in stock. (8)

Delivery facilities with space for kangaroo mother care
Percentage of facilities conducting deliveries with space designated for kangaroo mother care. (No data)

COVERAGE OF CARE

Contraceptive prevalence rate
Percentage of women age 15–49 in union currently using contraception. (9)

Mat need for birth spacing
Percentage of women in union who are using contraception and who wish to postpone their next birth. (9)

At least 1 antenatal care visit
Percentage of women attended by any provider at least once during pregnancy. (9)

4+ antenatal care visits
Percentage of women attended by any provider at least four times during pregnancy. (9)

First antenatal visit <20 weeks
Percentage of women less than 4 months pregnant at time of first antenatal visit. (9)

ITN in use in pregnancy
Percentage of pregnant women using an insecticide treated bednet the night before the survey. (9)

HIV+ pregnant women receiving ARVs
Percentage of pregnant women testing HIV-positive during visits to antenatal clinics who were provided with antiretroviral ARVs to prevent mother-to-child transmission. (10)

Women <34 weeks receiving ACS
Percentage of women <34 weeks gestation receiving antenatal corticosteroids for threatened preterm labor. (No data)

Births attended by skilled attendant
Percentage of births attended by skilled health personnel (doctors, nurses or midwives). (9)

Births by caesarean section
Percentage of births delivered by caesarean section. Caesarean section rates between 5 per cent and 15 per cent may reveal adequate levels of emergency obstetric care. (9)

Infants weighed at birth
Percentage of babies weighed at the time of birth. (9)

Newborns initiated on KMC
Percentage of babies receiving KMC. (No data)

Early initiation of breastfeeding
Percentage of infants who are put to the breast within one hour of birth. (9)

Exclusive breastfeeding up to six months
Percentage of infants aged 0-5 months who were fed exclusively with breast milk in the past 24 hours. (9)

PNC within 2 days (mothers)
Percentage of women with a live birth in the 5 years preceding the survey who received postnatal care (PNC) for their most recent live birth within two days of giving birth. (9)

PNC within 2 days (newborns)
Percentage of women with a live birth in the 5 years preceding the survey who received PNC during the first 2 days. (9)

RISK FACTORS FOR PRETERM BIRTH

Adolescent birth rate
Number of births per 1,000 adolescent girls aged 15–19. (1)

Birth interval <24 months
Percentage of women with two live births within 24 months. (9)

Female short stature
Percentage of women age 15-49 less than 145cm tall. (9)

Anaemia in women of childbearing age
Percentage of women age 15-49 with anaemia (cut-off ≤12.0 g/dl). (9)

Female obesity
Percentage of women age 15-49 with a body mass index (calculated as expressed as the ratio of weight in kilograms to the square of height in meters) (kg/m2) of more than 25.0 kg/m2. (11)

Diabetes prevalence in women
Percentage of adult women with fasting glucose ≥126 mg/dl (7.0 mmol/l) or on medication for raised blood glucose. (No data)

Hypertension in women
Percentage of adult women with raised blood pressure (systolic blood pressure ≥140 or diastolic blood pressure ≥90, or using antihypertensive medication. (No data)

Adult HIV prevalence
Percentage of adults living with HIV (1)

Tobacco use amongst women
Percentage of women age 15-49 who smoke cigarettes or a pipe or use other tobacco products. (9)

Households with place to wash hands, soap and water
Percentage of households with a place for washing hands that includes water, soap/other cleansing agents. (9)

Household solid fuel for indoor cooking
Percentage of households using solid fuel for cooking indoors. (9)

Violence against women in pregnancy
Percentage of women age 15-49 who have ever experienced physical violence during pregnancy. (9)

HEALTH WORKFORCE

Health worker density per 10,000 population
Number of medical doctors (physicians), including generalist and specialist medical practitioners, nursing and midwifery personnel per 10,000 population. (12)

Clinical standards for preterm care at hospital level
Number of 10 critical elements of preterm care (antenatal corticosteroids, tocolytics, magnesium sulphate, antibiotics for preterm premature rupture of membranes, no antibiotics with intact membranes, vaginal birth preference, kangaroo mother care, continuous positive airway pressure for respiratory distress, skin-to-skin therapy, surfactant) included in national clinical standards or guidelines. (13)

Nursing students receive formal education in neonatal care
Yes: Diploma or certificate program available for nurses in newborn care / No. No formal additional certification. (13)

HEALTH POLICY

National plan for RMNCH
Yes: Cooled plan or plans to scale up maternal, newborn and child health interventions available at the national level. / Partial: Cooled plan available but not for all components. / No: No cooled implementation plan for maternal, newborn and child health available. (14)

RMNCH plans include preterm components
Yes: RMNCH strategy includes mention of any critical elements of preterm care. / No: No mention of any critical elements of preterm care. (13)

Policy for KMC
Yes: National policy recommends Kangaroo Mother Care for low birth weight newborns. / No: National policy does not recommend Kangaroo Mother Care for low birth weight newborns. (14)

Policy for ACS use
Yes: National policy recommends use of antenatal corticosteroids for preterm labor. / No: National policy does not recommend use of antenatal corticosteroids for preterm labor. (14)

Policy for safe oxygen use and CPAP
Yes: National policy specifies safe oxygen use when continuous positive airway pressure is administered. / No: National policy does not specify safe oxygen use. (13)

HEALTH INFORMATION

Perinatal mortality audit in policy
National policy adopted requiring health workers to review perinatal deaths occurring in health facilities. Yes: national policy in place / No: No national policy. (13)

Birthweight captured in health management information system
Place to capture birthweight on facility registers, or in annual health sector reports, where forms or registers were not available. (13)

Gestational age captured in health management information system
Place to capture gestational age in weeks, on facility registers, or in annual health sector reports, where forms or registers were not available. (13)

COMMUNITY ENGAGEMENT

National advocacy group for parents of preterm babies
Yes: Existence of at least one support group for parents and family members affected by preterm birth. / No: No group information available. (13)

Preterm included in national RMNCH behaviour change strategy
Yes: Messages regarding preterm birth are included in national strategy. / No: National behavior change strategy does not include preterm birth messages OR no national behavior change strategy. (13)
